

Bumper Rollers

6148

Plastic bumper dent removal rollers

Polyvance's 6148 Bumper Rollers set a new standard for improving the efficiency of removing dents from bumpers. Three custom profile shapes remove dents in virtually every profile of bumper.

The wide roller is perfect for removing large dents on broad, flatter areas of a bumper, while the ball roller is ideal for removing dents in tighter radius areas and corners. The body-line roller is a specialty roller that helps reshape tight corners and restore the perfect shape to distorted body lines.

Other uses for the Bumper Rollers include removing dents in sheet metal and for pressing sound deadening material into place.

Features:

- Three custom roller profiles, engineered to remove dents from bumpers quickly and efficiently
- Constructed of high-temperature plastic to resist deformation when rolling hot plastic
- Heavy-duty welded roller frames
- Ergonomically designed nylon handles

Benefits:

- Speeds dent removal on plastic and metal
- Makes forming sharp body lines easier
- Reduces fatigue when reshaping deformed bumpers
- Improves shop productivity

Use:

- Heat the bumper with a heat gun or infra-red lamp until the dented area is hot and pliable, taking care to not over-heat the bumper.
- Select the shape roller that best fits the desired final contour.
- Roll the main part of the dent out, then continue to work around the perimeter of stretched areas as needed.
- Sand the outside of the bumper to identify high and low areas and repeat the process as needed until the desired shape is achieved.

Kit Contents:

- (1) - Wide roller
- (1) - Ball roller
- (1) - Body-line roller
